Re: Ashby Landfill, Biannual Report, Unique ID-SL0012.002

Dear Mr. Regan,

In accordance with the Ashby Landfill Closure Letter of Compliance and 310 CMR 19.142(6) this letter report is submitted for your records. The Landfill has remained unchanged subsequent to the Permit to Operate Small Transfer Station/Handling that was issued on September 14, 2005. Annual events can be summarized as follows:

Gas Monitoring - 2/12/06, 10/22/06, 4/7/07, 10/11/07, 4/13/08

Gas Monitoring results have been consistent during this reporting period, methane gas has been routinely detected at GW-1 located at the North End of the site.

Groundwater Monitoring - 5/7/06, 5/20/07, 4/19/08

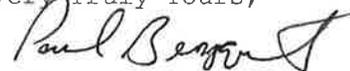

Groundwater Monitoring results have been consistent during this reporting period, exceedences to drinking water standards are best described as mineral (analyte) concentrations that are present in the natural occurring groundwater of the area. The exception to this generalization is the presence of cadmium detected at SW-2 during the 5/20/07 and 4/19/08 monitoring period. As previously requested by DEP, electronic files of summary tables for groundwater monitoring for the period 1995 to 2004 are attached on CD for your use.

Site Maintenance - 10/05, 10/06, 10/07

The Landfill Cap is inspected during the environmental monitoring. No deterioration of the cap has been observed to date. Vegetation is well established though out the cap. Site mowing occurs every fall during October to cut shrubs and trees that have become established over the growing season.

If you have any questions about this report, please contact me at your convenience at 617-416-2053.

Very Truly Yours,

Paul C. Bergquist, P.E.
